

Need to print on it? Plastic, foils, non-porous, tablets or capsules. We have an ink for you!

Nutec Systems introduces the APS Thermal Inkjet printer that prints on plastic, foil, non-porous surfaces, tablets and capsules. The APS is the only HP based printer system that can print on non-porous surfaces without the need for dryer assist. Nutec also introduces an HP ink that prints on tablets and capsules. The print cartridges contain ingredients on the FDA Gras (generally recognized as safe) list. This digital inkjet technology is the smart alternative to traditional pad printing, silk-screening and gravure on-product printing systems.

E-Pedigree, Serialized 2D Bar Codes, Track & Trace

Nutec Systems is in a position to handle your E-Pedigree Requirements, as well as various State or Regional Government mandated requirements. Nutec Systems does not believe that E-Pedigree or Track & Trace can be provided by supply a "one program fits all" approach. Our professional team will engineer a program that will meet your specifications, and those of your State.

Custom Integrated Printing, Vision & Product Handling Equipment

Nutec's custom integrated product handling systems integrate the Apsolute digital inkjet printer with customized vision systems and reject stations. The fully integrated module provides easy to operate, flexible systems to meet a variety of coding requirements. Integrated systems are designed to run in a "failsafe" process, that is all printed components are considered "bad" (rejected) unless the vision system returns a "good" signal. [Complete Validation Documentation](#) is available on all components. [Sustained Compliance](#) can be achieved as validation can be backed up to durable media to ensure system can be recovered at later date.
