

ENGINEERED

to be the best

The Panther CUB Label Applicator System is designed to be the most reliable piece of equipment on your plant floor. There is not another label applicator on the market that compares with the Panther CUB in terms of features, performance, and reliability. Utilizing all "off-the-shelf" components ensures replacement parts like sensors, motors, and controllers are always available through a multitude of sources. We know of no other manufacturer of labeling equipment that is dedicated to this way of thinking. Our standard two year warranty speaks for itself.

We also manufacture a complete line of labeling equipment while utilizing many of the same components. All of the applicator components that are used for our popular Panther 2000 product line are 100% compatible with the Panther CUB. Applicator modules like our tamp applicator, swing arm applicator and others can be used on the Panther CUB as well. Replacement parts like solenoid valves, sensors, and a multitude of other components are the same for both product lines. If your needs include labeling products with pre-printed labels and "on-demand" text, the Panther solution will allow for fewer spare parts.

Panther 2000 Print and Apply Labeling System

The Panther CUB has the fastest dispense speed in the industry!

Our Digital Display allows the operator to change timer values like product delay and applicator dwell times directly from the display. The display unit also shows ALL I/O points within the PLC with complete I/O descriptions and the current status (ON/OFF) of that point. The operator can also obtain current statistics like Cycle Count, Current Products Per Minute (PPM), Hours the CUB has been in operation and the Peak Products Per Minute the machine has achieved. Error reporting with a recommended SOLUTION is another feature of the operator interface that is an invaluable tool for your operator and maintenance staff. Not only does the display inform you as to what is wrong, but HOW to correct it.

- **WIDE** 6.00" label capacity
- "unlimited" label length
- all "off-the-shelf" components
- user adjustable label dispensing speed
- fast and accurate servo drive system
- PLC controlled (expandable)
- self calibrating label registration
- full digital control with operator display
